

MoSCoW Method –Feature Prioritization for “YOUR DOCTOR” Medical App

The **MoSCoW** method was used to prioritize the functional and non-functional requirements of the “**Your Doctor**” AI application and clearly define the **MVP** scope.

This approach helps identify critical features such as symptom analysis, follow-up questions, urgency detection, and secure data handling as top priorities.

MUST HAVE	User registration and login Basic health profile (age, gender) User consent before using the app User can enter symptoms AI asks detailed follow-up questions AI analyzes all answers AI provides possible conditions AI shows urgency level (low / medium / high) Recommend the right specialist (General doctor, dermatologist ..) Provide general health advice Suggest over-the-counter medicines only(can buy it without a prescription) Show clear warnings before suggesting any medicine Data privacy and secure storage
SHOULD HAVE	Consultation history tracking(user can see past results) Detailed health profile (allergies, chronic diseases) PDF summary of the session Multi-language support Detailed explanation of suggested medicines Health education content(articles,tips of healthy life) Simple medical explanations
COULD HAVE	Appointment booking link Personal health dashboard Health reminders (notifications) Connection with clinics or hospitals Pharmacy intergration (check medicine availability) AI learning and improving overtime
WON'T HAVE	Official medical diagnosis Prescription of regulated medicines Emergency medical service management Full replacement of doctors
